Approved by the World Agricultural Outlook Board

WASDE-189 - January 10, 1986

## HIGHLIGHTS

This month's commodity supply, use, and price estimates for 1985/86 do not take into account provisions of the Food Security Act of 1985 (the new farm legislation), since new farm program provisions have not been announced.

World grain production estimates were reduced this month. Reduced wheat prospects in Argentina offset increased Brazilian prospects. A slight increase in U.S. wheat production and lower exports will add to ending stocks. Lower estimated world coarse grain and rice production mainly reflected smaller area and weather-reduced yields in China and lower corn prospects in Brazil.

Deteriorating prospects in Brazil and Paraguay led to sharp drops in estimated Southern Hemisphere soybean output and exports; estimated U.S. soybean exports were increased. A slight upward revision in global cotton output will add to ending stocks. U.S. cotton production and export prospects deteriorated further in the past month.

Total U.S. meat production prospects for 1986 increased slightly this month with more beef and turkey and a little less pork. Total meat output is still forecast 1 percent below the 1985 level.

## GRAINS

Wheat. Projected global 1985/86 wheat output was reduced slightly this month as another reduction in Argentine production offset an increase for Brazil. Continued wet weather in some areas of Argentina is leading to the second wettest spring crop season since 1950 and the smallest crop in 4 years. Brazil's harvest set a record. World wheat trade is forecast down slightly.

The final U.S. estimate is for a wheat crop of 2,425 million bushels, up slightly from last month. The U.S. export forecast for 1985/86 was lowered. Ending stocks were raised, with the addition going to CCC inventory. Wheat under loan currently exceeds the end-of-year free stocks estimate. With more wheat expected to go under loan before March, redemptions will be necessary. This will likely support prices somewhat despite a sharply lower 1986 loan rate. No assumptions about specific 1986 program provisions were incorporated into supply/use estimates. When announced, those provisions may affect expectations of new-crop supplies and old crop prices prior to harvest.

Coarse Grains. World coarse grain production was marginally reduced this month. Estimates for China, Brazil and India declined, while Sudanese production increased. China's coarse grain output was lowered over 3 million tons. Continued drought lead to a drop in projected Brazilian corn yields and production.

Estimated world coarse grain trade rose slightly, mainly because of a likely increase in Brazil's corn imports. Trade competition intensified during the past month with larger supplies of feed-quality wheat in major exporting countries, increased attempts by Spain to export barley, larger sorghum supplies in Sudan, and a rise in estimated Chinese corn exports.

Final U.S. barley and oats production estimates were reduced slightly. No changes were made in U.S. use projections for 1985/86. With wheat likely to be priced more competitively with corn next summer, U.S. feed grain prices may tend to be at the lower end of the forecast range.

Rice. Projected 1985/86 global rice production was reduced 1 percent this month, reflecting a reduction of 3.5 million tons (milled) in Chinese output. Shifting emphasis away from grains reduced China's rice area this season. Projected world rice trade was virtually unchanged from last month.

The final U.S. production estimate increased to 136 million cwt. No changes were made in demand projections, since program provisions have not been announced. A lowering of the repayment rate for 1985 crop rice now under loan would likely reduce market prices and boost exports after the April 15 loan maturity date. The loan repayment rate will be based on the formulated world rice price. Program provisions to be announced could affect the expected size of the 1986 crop and thus, market prices at the end of the old crop year.

#### OILSEEDS

World oilseed production is forecast lower than last month but is still record large. Sharply reduced Southern Hemisphere soybean production accounts for much of the change. Severe drought in Brazil's southern states and in Paraguay has cut soybean planting short and reduced yield prospects. The Brazilian soybean crop estimate was dropped 17 percent from last month and is more than 20 percent below last year's record. Paraguay's soybean crop is also about 20 percent below 1984/85. Given the severity of stress, widespread moisture will be needed soon to allay further losses. Brazil and Paraguay's soybean export prospects are sharply reduced, but Brazilian meal exports are unlikely to decline.

U.S. exports were raised about 1 million tons over last month because of reduced Southern Hemisphere exports. Brazil's deteriorating crop prospects also point to good U.S. export prospects in early 1986/87, and to possible imports by Brazil. Upward revisions in U.S. palm oil and coconut oil imports this month reduced estimated soybean oil use. With lagging soybean meal use in October-December, 1985/86 domestic soybean meal use was slightly reduced. Soybean and soybean meal prices were revised up slightly this month while soybean oil prices were lowered.

#### LIVESTOCK, POULTRY, AND DAIRY

The U.S. total meat production forecast for 1986 is up slightly from a month ago, but is still expected to be around 1 percent below the year-earlier level. Red meat production is likely to decline almost 4 percent while poultry output rises nearly 5 percent.

Beef. The 1986 beef production forecast was raised this month, but for all of 1986 is expected to be about 4 percent below the 1985 level. With fourth-quarter 1985 fed cattle slaughter lower than expected, more fed cattle were carried into 1986, boosting early 1986 beef production above previous expectations. Recent cow slaughter has been higher than expected, and may hold at a relatively high level. The new dairy legislation is expected to increase dairy cow slaughter, but the level is uncertain since the new regulations have not been announced.

Pork. The December Hogs and Pigs report showed that producers are not expanding. The breeding inventory on December 1 was down 2 percent from a year earlier and farrowing intentions for the next 6 months only matched those of a year earlier. This suggests a lower level of pork output than previously forecast. Production for all of 1986 is expected to be down about 3 percent.

Poultry. Turkey producers, following good returns in 1985, sharply increased poult placements in recent months, suggesting that 1986 turkey production will top previous forecasts. Production is now expected to rise about 7 percent over 1985. Turkey prices made a sharp seasonal drop the last few weeks and the large output likely will keep early 1986 prices below year-earlier levels.

Dairy. Supply and use estimates for dairy were not updated this month. New dairy legislation, particularly the whole herd buyout, is expected to affect milk production this year. It is not possible to assess the program's impact on supply and use forecasts since program details have not been released.

#### COTTON

A slight upward revision in the global cotton production estimate is adding further to 1985/86 ending stocks. Sharply improved prospects in Pakistan are largely offset by reduced crop estimates for the United States and Brazil. With little change this month in prospective consumption and trade, this season's ending stocks may edge up to 51 million bales, more than one-fifth above the beginning level.

Major changes were made in this month's U.S. production and export estimates. Export sales continue to dwindle as most major foreign exporting countries sharply undercut U.S. prices in international markets. As a result, U.S. exports this season may total about 2.8 million bales, down 0.3 million from month-earlier indications, and the smallest since the late 1960's. But with an offsetting reduction in the 1985 crop, ending stocks still are expected to total around 9 million bales, the largest since the mid-1960's.

Significant changes in other countries include upward revisions in Pakistani, Mexican, and Indian production. Pakistani and Indian exports also were increased. The Brazilian crop has been revised down moderately. Consumption estimates for India and Japan were revised slightly.

APPROVED:

ACTING SECRETARY OF AGRICULTURE

1/ Upland and extra-long staple; marketing year beginning Aug. 1. Totals may not add and stocks may not balance due to rounding and differences unaccounted between ending stocks based on Bureau of Census data and the previous season's supply less total use. 2/ The "probable variation" is based on the root mean square error and/or standard error of the estimate from trend and analysts' judgment. Chances are about two out of three that the outcome will fall within the implied ranges. 3/ Based on Bureau of the Census data. 4/ Includes imports. 5/ Season average farm price, domestic measure, cents per pound; metric measure, dollars per kilogram. 1984/85 values are weighted averages for the first eight months of the marketing season; not an estimate for 1984/85. 6/ USDA is prohibited from publishing cotton price projections.
